

Indoor ambient monitoring and awareness for every building.

Description

We are spending our lives more than 80% of the time indoors where the air quality can get up to 5 times worse than outdoors. SensiX Environment offers an end-to-end monitoring solution using non-intrusive and privacy-preserving wireless sensor devices with minimalist design, mounted on the walls.

SensiX Environment

Business Model

We help businesses to ensure customer satisfaction and a healthy indoor environment while discovering ways to reduce operational costs. Every facility is different, so we collect relevant ambient and key-equipment parameters to come up with actionable insights and specific recommendations.

Category

Air; Monitoring & compliance; Smart building; Sensors and actors; Facilities; Monitoring and Compliance; Artificial intelligence

Target

We successfully deployed two pilot projects helping a sports complex to ensure customer satisfaction and eco-house developers to demonstrate a comfortable environment with low utility consumption. Focusing on becoming customer ready while decreasing time to market is our main concerns right now.
