

Experts in IoT (Internet of things) with a unique companion for Hardware Design and an in-house biological laboratory.

Description

EMBIO Diagnostics (EMBIO) designs and develops custom based hardware solutions and consults as an expert in the biotechnology at a global scale.

EMBIO Diagnostics
Cyprus

Business Model

We have developed a state of the art hardware that reads biosensor signals and detects specific substances.

Category

Air, water & environment; Monitoring & compliance; Food and beverage; Urban micro farming equipment; Agriculture; Biotech

Target

Rapid Biosensors produce screening results in 3 minutes. The system can be adopted to detect anything. By modifying the biosensors the device can be adjusted to measure any signal from the electrode. The mobile application uses an algorithm to calculate response. The system provides support and blockchain integration for securing the information.
