

PAVE - The intuitive construction app for documentation, task & defect management

Description

PAVE offers an intuitive tool for construction documentation, task and defect management. Our clients are architects, engineers, facility managers and others in charge of managing real estate projects. Today, most people use voice recorders and fax machines to document construction progress and handle tasks. PAVE enables them to digitize these processes and allows to save 7% of overall project resources.

PAVE
Germany (Munich)

Business Model

PAVE was founded in early 2018 with the aim to make construction and real estate projects more efficient and sustainable. As a software as a service company (SaaS), we charge clients a yearly subscription fee to use our product (app and web app). PAVE can be used across all devices and all platforms. During projects, users can grant partners free access to the platform for single projects in a view-only mode to handle processes via PAVE.

Category

Air, water & environment; Monitoring & compliance; Green building; Facilities; Online/digital services/eCommerce; Data Centres and Services; Analytics; Artificial intelligence

Target

After the product launch of PAVE early this year, we are very proud to state that we have won our first customers. A second success we are really proud of is, that PAVE has been recently awarded the prize for the best German PropTech Startup in 2018. In the following months, we are looking forward to convincing additional customers, implement the valuable product feedback we received from our existing users, and continue to implement digital processes to make construction more efficient and sustainable.
