

Harnessing Social Networks, Trustporter is the most convenient, trust-centered, and inexpensive solution for all your shipping and transportation needs.

Description

Trustporter, is a shipping and transportation system based on trust. It is designed to match requests to transport goods or people, with other people that happen to travel along the requested routes anyway. To accomplish this, Trustporter institutes crowdsourcing into shipping and transportations. In doing so, it intends to revolutionize the shipping and transportation industry around the world.

Business Model

Trustporter's revenues will come from its services. It offers the option to customers to transport items or get lifts very inexpensively, compared to doing the trip themselves or paying courier and transportation services. Trustporter will suggest a low price for every shipping and transportation request and will charge a 15% commission on the suggested price, plus an additional small fixed amount for real-time requests and other value-added services.
