

CHRG Network is software platform for Electric Vehicle (EV) charging that connects all charging stations into a single network, enabling owners to share and monetise their charging stations. Driver App allows to find, book, and pay for access to charging stations.

Description

To solve the need and market gap between number of EV's on roads and charging infrastructure needed CHRG Network was created. CHRG Network is an open platform connecting idle private charging stations and public charging networks into a single network. CHRG Network brings sharing economy to EV charging market. This solution enables monetisation of under-utilised charging stations and expansion of customers' base for existing charging networks. For EV drivers CHRG Network provides an access to wide Charging Station (CS) network.

Business Model

CHRG Network provides a software system for small and medium businesses to operate charging stations. Our software automates customer on-boarding, facilitates payment & billing and provides station marketing tools. Our revenue comes from 10% transaction fee also licensing fees from large network operators.

Category

Energy management systems;
Management of networks, grids;
Mobility, transport & logistics;
Fueling/charging infrastructure

Target

CHRG Network is going to enter countries with the highest level of infrastructure development and most favourable conditions for adherents of electric mobility. Commercialisation strategy in 2019 involves partnership development and entry to Norway market, investment attraction and entrance to 2nd priority markets, and further global expansion. The company will direct its activity to interact with small and large CS networks and private CS owners in target countries.
