

Sustainable solutions for a sustainable world

## Description

---

AGT implements key-in-hand system within the industrial facilities of fruit companies, coupled with a patent green technology that enables to separate specific nutrients and beneficial molecules from the fruit waste by the application of sustainable technology (environmentally friendly chemistry). The combination of the system and tech transforms 100% of fruit waste into high value-add and marketable products.

## Business Model

---

AGT is a B2B and has three revenue streams in its business model. The first it is a setup fee for system assessment and implementation within customers, the second it is a renewable fee for technology licensing (patent) and third it is a sales percentage from the new products development and opening the sales channels.

## Category

---

Circular economy / waste mgmt.;  
Manufacturing; Industry efficiency

## Target

---

Close the 1st process implementation within the qualified lead, establish new clients and develop a strategy to-go-to the international market.
