

<p>Transparent carbon offset marketplace using tokenized natural resources as carbon sinks.</p>	<h3>Description </h3> <hr/> <p>Local Offset connects local forest and landowners with companies that want to offset their climate footprints. We tokenize natural carbon sinks for their carbon offset potential and create a fully traceable blockchain-based carbon market.</p>
 <p>Local Offset Estonia</p>	<h3>Business Model </h3> <hr/> <p>We're offering a new alternative business model to landowners, enabling them to sell carbon offset from their lands - because nature, forests, wetlands, trees, soil capture CO2 from the atmosphere. Companies that want to become climate neutral can buy carbon offset from those landowners and, by that, make a real and tangible impact in the local community. We collect a 15% handling fee from each transaction made on the market.</p>
